Figure 2: Rate of work-related emergency department visit per 200,000 hours worked in Ontario (2004-2008) by event and hour

Note: Strain injuries = bodily reaction and exertion related injuries; Contact = injuries associated with contacts with objects or equipment; each hour interval corresponds to 1 full hour interval. For example, 1:00 am includes all injuries between 1:00-1:59 am. Rates are based on a 3h weighted average.
Figure 3: Rate of lost-time claims per 200,000 hours worked in Ontario (2004-2008) by event and hour

Note: Strain injuries = bodily reaction and exertion related injuries; Contact = injuries associated with contacts with objects or equipment; each hour interval corresponds to 1 full hour interval. For example, 1:00 am includes all injuries between 1:00-1:59 am. Rates are based on a 3h weighted average.
Figure 4: Rate of emergency department records per 200,000 hours worked in Ontario (2004-2008) by gender and hour

Note: Each hour interval corresponds to 1 full hour interval. For example, 1:00 am includes all injuries between 1:00-1:59 am. Rates are based on a 3h weighted average.
Figure 5: Rate of Lost-time Claims per 200,000 hours worked in Ontario (2004-2008) by gender and hour

Note: Each hour interval corresponds to 1 full hour interval. For example, 1:00 am includes all injuries between 1:00-1:59 am. Rates are based on a 3h weighted average.
