MOBILE X-RAY EXAMINATIONS ON SITE

Time occupied 5 mins per man

# For INDUSTRIAL DISEASES OF THE CHEST

## An X-ray service of interest to every I.M.O. throughout Britain

PORTABLE X-RAYS LIMITED are regularly employed by many industrial organisations throughout the country for chest examinations of personnel on site. Apart from the enormous advantages of this method in cases of any industrial hazard, it is an easy and convenient way of making periodic checks on the chests of staff, for example, where large numbers work in close proximity with each other.

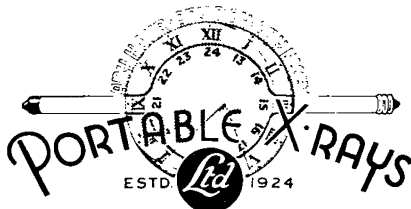

Night-shift workers can be examined during working hours. All examinations are carried out on full size films.

Further details on request.

# Why Supererogate?

In the treatment of many surface infections the use of a topically applied antibiotic may be considered unnecessary and extravagant, as the non-antibiotic and inexpensive diamidine compounds will often prove equally effective.

#### DIAMIDINE PREPARATIONS

- ★ Have a broad spectrum of antibacterial activity.
- ★ Diminish the risk of infection with, and are effective against, certain antibiotic-resistant organisms.
- ★ Are also effective against certain pathogenic fungi.
- ★ Are not inhibited by blood, pus or tears.
- ★ Are extremely well tolerated and rarely give rise to sensitization reactions.
- ★ Maintain their potency almost indefinitely without special conditions of storage.

# NEW Elastoplast Anchor Dressing

The Elastoplast Anchor Dressing is an elastic fabric dressing spread with porous adhesive and tailed to give firm anchorage on awkwardly shaped, mobile and hard-to-dress areas, particularly on the hand.

The Elastoplast Anchor Dressing is an ideal emergency dressing for use in industry where injuries to the hand are common and unrestricted movement is important. The adaptability of this ingeniously shaped dressing gives firm anchorage on many other mobile, fissured and angular sites—on the face, neck, wrists, feet and joints where conventional dressings are hard to keep in place.

## NEW non-adherent pad

The dressing has an unmedicated pad covered with a new, unique expanded plastic net with non-adherent properties. During healing this keeps the wound free from blood, which collects in the pad behind the net. The dressing can therefore be removed painlessly without opening the wound, and in conditions in which dressings soil quickly, they can be changed frequently with minimum interruption of healing.

Order No. 4102 Size 3" × 1½" with unmedicated pad 1" × 1" Pack Boxes of 100 Each dressing wrapped and sterilised

'Elastoplast' is a registered trade mark of T. J. Smith & Nephew Ltd.
