For INDUSTRIAL DISEASES OF THE CHEST

**An X-ray service of interest to
every I.M.O. throughout Britain**

PORTABLE X-RAYS LIMITED are regularly employed by many industrial organisations throughout the country for chest examinations of personnel on site. Apart from the enormous advantages of this method in cases of any industrial hazard, it is an easy and convenient way of making periodic checks on the chests of staff, for example, where large numbers work in close proximity with each other.

Night-shift workers can be examined during working hours.

All examinations are carried out on full size films.

Further details on request.

Poor old Charlie. Entonox could have saved a trip to hospital.

You can't blame the factory medical staff. They can only treat casualties within the limits of their equipment. And surprisingly, a great many medical centres are not equipped to deal with painful procedures. So at the slightest suggestion of pain, the casualty is sent to hospital -- even if the injury amounts to no more than a cut finger. It needn't happen.

BOC has a unique pain-killer tailor-made for just this sort of situation. Entonox*.

Entonox is a 50:50 mixture of nitrous oxide and oxygen. The 50% N₂O provides really effective pain relief. And the 50% O₂ ensures total safety.

Entonox is so safe, particularly when self-administered, that it has been sanctioned for use by ambulance and other non-medical personnel.

So Entonox recommends itself as standard equipment in factory medical centres. At last, your company's investment in its own centre can now be utilized to the full -- by treating patients on the spot effectively and painlessly.

At times Entonox can also be a life-saver. It's recommended for the emergency treatment of coronary attacks.

And it is the safest pain-killer to give a man who has been trapped as a result of his accident, and whose injuries cannot be treated until he is freed because, unlike morphine, Entonox will not mask symptoms.

For more information please write or phone: Medical Sales Dept., The British Oxygen Company Ltd., The Pinnacles, Harlow, Essex. Telephone: 027-96 29692.

*Entonox is BOC's registered trade mark for nitrous oxide-oxygen mixtures.

Three applications of topical interest

BRULIDINE antiseptic cream

containing 0·15 per cent dibromopropamide isethionate, in tubes of 25 grammes and jars of 500 grammes – for the prevention and treatment of surface infection in burns, scalds, abrasions, cuts and other skin conditions.

BROLENE eye ointment

containing 0·15 per cent dibromopropamide isethionate, in tubes of 5 grammes.

BROLENE eye drops

containing 0·1 per cent propamide isethionate, in 10 ml polythene dropper bottles
– for infections and superficial injuries of the eye.

- Wide range of antibacterial activity
- Effective against certain pathogenic fungi
- Action not inhibited by blood, pus or lachrymal secretion
- Well tolerated by sensitive tissues
- Rarely give rise to sensitization reactions

CHEST X-RAY SERVICES.

The emphasis of Chest X-Ray Services is on:

1. The highest quality full-size chest radiographs.
2. At times convenient to management and men, on site.
3. With modern equipment.
4. In spacious mobile vehicles or static units specially designed for industrial purposes (60-100 X-Rays per hour) and
5. Rapid provision of radiographs (and report if requested) to works doctor.

For further information, please write or telephone to:
Medical Service,
National Coal Board,
Hobart House, Grosvenor Place,
London SW1X 7AE
Telephone 01-235 2020
Extn. 254.

Operating from six bases in Great Britain, the mobile and static units of X-Ray Services can offer a convenient system of chest X-Ray examination for new entrants, for special and for periodic surveys. For almost 20 years the Medical Service of the National Coal Board has been carrying out chest X-ray examinations of miners and other staff. In the last 10 years, well over 1 million radiographs have been taken. For geographical reasons, bases must be maintained throughout the country, but with the reduction in manpower there is now some spare capacity which can be made available to other industries.

TODAY'S DRUGS

New 1970 Edition

The problem facing the prescribing doctor today is choice. Catalogues of drugs—no matter how detailed—are of little help unless accompanied by advice on which drug to give for what condition. So this new edition of "Today's Drugs" not only gives a full account of the drugs but also includes clear accounts of the management of common conditions such as urinary infections and epilepsy.

The new edition differs from the earlier one in other ways. It deals with only three subjects— infections, vitamin deficiencies and anaemias, and disorders of the nervous system. Further volumes will be published at intervals of about a year, and by the time the whole field of therapeutics has been covered this first volume will have become obsolete and due for replacement. In order to further emphasize the ephemeral nature of books on therapeutics—and to cut costs—the book is a paperback.

Demy Octavo

Paperback

224 pages
