## Baffled by statistics?

All doctors and medical students need a basic understanding of the statistics presented in medical journals and at clinical meetings. *Statistics in Clinical Practice* is a practical, easy to read guide to demystifying statistics which will show you how to interpret data and present statistical information yourself.

- Covers all the basic principles including probability, making conclusions based on statistical results and summarising data.
- Contains realistic clinical examples.
- Assumes only a basic knowledge of mathematics.
- Includes useful questions and answer sections to test yourself.
