Notes: As for Table 2, the all casual employment coefficients, including for interactives, are interpreted relative to permanent employment. The fixed-term, self-employed and other employment categories are included in the estimations but are not shown here. # denotes casual employment interacted with age, marital status or education level. '# 15-24 years', for example, is the casual employment coefficient for 15-24-year olds, interpreted relative to permanently employed workers of all ages.
