230	ZWE	Zimbabwe	WHO MS	9	14,903,667	2012-2014
Total					7,171,184,607	

^aThe WHO Member States (MS) of Cook Islands and Niue are excluded due to unavailability of population data.

^bWHO MS = WHO Member State (N=192); NON-MS = Non WHO MS (N=2); IR = Insular Region (N=34);

DT = Deputing Territory (N=2); IR+DT (N=36).

^c1 = Countries reported high quality data used for reference rates (N=59).

0 = Countries reported poor quality data not used for reference rates (N=45).

9 = Countries with no reported data (N=126).

^dThe most recent 3 years with available data on mesothelioma death (used in analysis).

*-Data on mesothelioma death was reported for men but not reported for women in Bahrain, thus, counted as a reported and referenced.

Table S2. Summary of the Reporting and Data Quality Status of Studied Countries

Number of Countries	Notes	
All Studied Countries	230	
WHO		
Member States	192 ^a	
Reporting	92	
Used for Reference Rates	57	
Not Used for Reference Rates	35	
No Reported Data	100	
Territories etc.	36	
Reporting	12	
Used for Reference Rates	2	
Not Used for Reference Rates	10	
No Reported Data	24	
Non-MS	2	Kosovo + Liechtenstein
Summary:		
Countries Reported Data Used for Reference Rates (With High Quality)	59	57 + 2
Countries Reported Data Not Used for Reference Rates (With Poor Quality Data)	45	35 + 10
Countries with No Reported Data	126	
MS	124	100 + 24
Non-MS	2	Kosovo + Liechtenstein
Countries Targeted for Extrapolation (Reported Data Not Used for Reference Rates + No Reported Data)	171	45 + 126
Countries Analysed for Crude Mortality Rate:	104	92 + 12

^aTwo Member States (Niue and Cook Islands) were precluded due to lack of population data.

Table S3. Grouping Method of Asbestos Use for Calculations based on Asbestos Use

Asbestos Use		H	M	L
	Cumulative			
Per capita				
	H	HH	HM	HL
	M	MH	MM	ML
	L	LH	LM	LL

H- High, M-Medium, L-Low

A total of 162 countries that reported asbestos use were grouped into 3 groups: “high”, “medium” and “low.” All countries were first grouped into 3 categories, “high”, “medium” and “low” based on cumulative use and per capita use (from 1925 to 1985), each of which were divided into three equal-sized sub-groups designated as high, medium or low. If either cumulative use or per capita use was high, then the country category was “high.” If both cumulative use and per capita use were low, then the country category was “low.” All others were categorized as “medium.” The fourth category “none” was composed of either countries that reported asbestos use as zero or countries that did not report asbestos use according to the USGS.

Table S4. Reported and Estimated Number of Mesothelioma Deaths

N	Code	Country	Extrapolation method			Reported ^a	Asbestos - adjusted	Estimated ^b	
			Asbestos use	Continent	Employment			Continent-adjusted	Employment-adjusted ^c

^aThe average number of reported mesothelioma deaths for the 3 most recent calendar years with available data in the WHO Mortality Database. Unit in deaths per year.

The most recent 3 years correspond to the "Year" column in Table S1.

First and second numbers in bracket represent estimated number of death for men and women, respectively.

"-" = Not Applicable.

^b Estimated by extrapolation. First and second numbers in bracket represent estimated number of death for men and women, respectively.

^c if Employment category is NA, then CMR=1 is used.

^d Sum of referenced and estimated numbers, i.e., global burden of mesothelioma in the present study.

* Mesothelioma death is reported for men but not for women in Bahrain. Thus, Bahrain is shown in both referenced and estimated countries.

H-High; M-Medium; L-Low; NA-Not applicable
